

# Educade

The safe child-friendly fence system.

## Design

Educade developed to prevent unsafe situations at schools, playgrounds and nurseries. To stop children from leaving the property. Most fences chosen for the task pose a safety risk in themselves. This smart design with a responsible choice of material puts an end to that.

## Prevention

Educade is designed to the latest EU regulations and to prevent risks. There are no protruding parts to hurt children. All post/panel fixings are invisible, hidden inside both the rails and posts. The distance between palings is 78mm and the ground clearance should be never more than 50mm. No stepping points between 200mm & 700mm in height reduces the possibility of climbing the fence.

Gates have special hinges placed to reduce jamming points and a distinctive highly positioned, push & twist "medicine bottle" style door knob. This high level, hard to reach, two action lockable mechanism makes opening practically impossible for a child.

## Height

1.25m standard.

## Swing Gate

Access widths

1.25m or 1.50m single leaf  
&  
2.50m or 3.00m double leaf.

## Surface Treatment

- Hot dip galvanised as standard:
- Option; additionally powder coated:
  - (i) A standard RAL colour:
  - (ii) Any RAL colour:

Educade fence

Height	Posts section	centres	Rail section	Palings section	centres	gaps
